

FORKLIFT SAFETY SOLUTIONS

KOOI® Telescopic ReachForks

**Extend reach to unlock
more storage space**

Allows operators to access double deep racking with ease, allowing you to optimise warehouse space.

**Faster handling with less
forklift repositioning**

Smooth hydraulic extension reduces repeat movements, speeding up loading, unloading, and daily pallet handling.

**Safer and easier load
handling**

Fewer manual adjustments improve load control, reduce operator fatigue, and support safer handling.

Engineered for versatility and durability, ReachForks combine smart design with practical forklift use.

With the ability to hold two pallets, tasks are completed faster while reducing operator strain.

Enhanced operational control

KOOI® ReachForks give precise handling in tight spaces, letting operators manage loads smoothly and accurately across various applications.

Reduced equipment wear

These hydraulic forks minimise unnecessary forklift repositioning, lowering strain on trucks and attachments while extending service life and reliability.

Cost-effective operations

By handling pallets faster and with fewer adjustments, the KOOI® ReachForks reduce labour time, lower operating costs, and boost efficiency across your warehouse.

Flexible load management

The forks can handle various pallet sizes and warehouse applications efficiently, giving directors and OEMs a versatile solution for all customer operations.

Versatile applications

Suited to double deep storage, one-sided (un)loading, dual pallet handling and euro pallets, the KOOI® ReachForks increase capacity and improve handling efficiency.

Simpler staff training

Intuitive design and easy controls make the forks simple to operate, helping new staff become productive faster without compromising safety.
