

FORKLIFT SAFETY SOLUTIONS

Forklift Safety Camera Systems

Improves Workplace Safety and Efficiency

A better view of the forks and your surroundings increases driver awareness and reduces the risk of accidents.

Enhances Ergonomics for Driver Comfort

Reduces back and neck fatigue, improves concentration, precision, speed, and efficiency.

Cloud-Based Recording

Instant access to video footage of incidents. Drives new standards of health and safety compliance.

Systems to suit a wide range of counterbalance and warehouse trucks, with the possibility to integrate with our wider range of forklift safety solutions.

Delivers improved safety

Solutions include forward view and reversing cameras and intelligent next generation cloud-based video recording systems for immediate access to critical incident footage.

Guaranteed reliability

Designed and manufactured in the Netherlands, extensively tested, and widely recognised for their superior quality and reliability. Extended warranty, five year and seven year options.

Industry leading performance

Designed to operate in the harshest environments. Cold store ready, Zone 2 compliant, waterproof, shockproof and works in the most extreme temperatures (-40°C to +85°C).

Camera and monitor systems offer superior ergonomic benefits, reducing driver fatigue through enhanced vision.

Better vision, fewer incidents

Poor visibility is one of the most common causes of forklift accidents. Fitting cameras to a forklift improves safety by giving the driver visibility of obstacles and of areas that would otherwise be blind spots

Tailored solutions

Camera and monitor options to suit all counterbalance and warehouse trucks. Provides the visibility operators need to work safely and efficiently.

Return on investment

A camera system gives drivers a better view, which saves time and increases productivity. Reduced damage and increased efficiency mean the system will quickly pay for itself.
