# Mobile Weighing Safety Systems

### **Ravas SafeCheck**

Provides weight information and audible overload warnings at a preset value.

Overloading remains one of the most common causes of lift truck accidents and can be avoided by retrofitting one of the Ravas Safety Systems.

### **Ravas SafeLoad**

Constantly checks load weight and load centre to ensure truck stability.

The Ravas SafeCheck is an economic weighing system and solution to the problem of lift truck overloads.

### **Ravas SafeCheck Overload Safety System**

#### **Simple to install**

The maximum allowed weight is entered during setup. The SafeCheck can be retrofitted on any lift truck and works in combination with forklift attachments.

#### **Always working**

The system automatically switches on when the truck starts, so it's active whenever the truck is operating.

#### **Easy to use**

The RAVAS SafeCheck is a simple and affordable safety system for forklift trucks, with an audible alarm that sounds when the load exceeds a preset limit.

The Ravas SafeLoad is a unique weighing and lift truck stability safety system.

### **Ravas SafeLoad Stability Safety System**

#### **Unique dual sensor technology**

Using a combination of load sensors, the SafeLoad system constantly monitors load weight and load centre to ensure truck stability.

#### **Driver alerts**

Audible and visual warnings instantly warn if the truck is becoming unstable due to excessive load weight or combination of load and extended load centre.

#### **Tailored to your operations**

Initial setup is agreed with site managers to ensure safe lifting parameters are always observed. Suitable for a wide range of lift trucks and works in combination with forklift attachments.
