

FORKLIFT SAFETY SOLUTIONS

Loadcell Mobile Weighing

Simple and quick forklift integration

Quickly install the weighing systems without disrupting operations, so your team can maintain productivity.

Connects to warehouse systems

Seamlessly integrate with your WMS, giving you real-time weight data to support faster, smarter warehouse decisions.

High load data accuracy systems

Delivers reliable weighing results with up to 0.1% accuracy, helping prevent overloading and reduce costly handling errors.

Increase flexibility with accurate, real-time weighing on the move

Save time by combining lifting, weighing, and counting in one step.

iForks

RAVAS iForks boost warehouse productivity by combining load handling and weighing. These forks fit most forklifts, install in minutes, and give you real-time, high-accuracy readings.

PPT

With the weighing system built into the electric pallet truck, operators can see load weight instantly. It helps avoid overloading and can be connected to your warehouse systems to support more accurate order picking.

iCP

The iCP helps reduce unnecessary movement, saves time on busy shifts, and supports more accurate load management—all without changing your normal routine.

Load pin

Developed by Abbey for the JCB Teletruk, this system delivers reliable accuracy—within 1% of truck capacity. The components sit away from the lifting load, which helps protect the system and keeps ongoing maintenance to a minimum.

Working with Abbey

Abbey helps match the right system to your forklift and workflow. Whether you need a quick install, advice on compatibility, or support after fitting—we're here to make it straightforward.
