

FORKLIFT SAFETY SOLUTIONS

XQ360 Telematics Fleet Management System

Serves as the eyes and ears of operations managers

Allows fleet managers to record and present critical data for customisable preop checks, performance analysis and damage reporting.

Drive new standards of H&S compliance

Gives greater control of fleet operations, improving safety, productivity and accountability.

User-friendly portal with subscription-free connectivity

Wi-Fi or 4G connections provide live truck and operator data, driving efficiencies and supporting key safety decisions.

XQ360 is designed to optimise forklift productivity for small and large-scale fleet users.

Fully customisable and perfect for mixed fleets, XQ360 can be installed on any forklift truck.

Critical management information

XQ360 enables fleet and site managers to record, compile, and present critical management data necessary for performance analysis, and damage reporting. The customisable pre-operation checks also allow for tailored questions to address specific needs across your fleet.

Control truck access

XQ360 allows only licensed, qualified, and trained drivers to operate vehicles by using either RFID card, fob or PIN code - no additional hardware needed.

Live operational data

XQ360 offers Wi-Fi and 4G connectivity, delivering real-time vehicle and driver performance data to your smartphone, tablet, or computer. Its user-friendly portal ensures full control over management updates and checks. Abbey also offers 5 years of data included in the price, with no subscription or extra hidden costs.

Instant incident reports

XQ360 becomes the eyes and ears of operations managers. The system is calibrated to recognise vehicle impacts and to report the location and time of the incident. Alerts are sent to supervisors and vehicles can be placed in safe mode until they have been assessed.
